2Unify Announce V2.0 Release

Lauderdale, PA., August 31, 2006: 2Unify is announcing Version 2.0 for General Availability. This Version represents our most significant delivery and puts in place the next level of group capability for polling and other future enhancements and architectural robustness.

This foundational improvement in the architecture puts 2Unify in the unique place of delivering all major functionality from the 2Unify Community of Groups. And beyond that capability, 2Unify is now positioned to be able to make rapid changes to meet unique and future customer needs.

"We are very pleased to announce this transition to Version 2.0. The upgrade was driven by our clients' real-world experiences and their creative thoughts for use of 2Unify in their future. Of significant note is that we were able to implement this transition with no client disruption of services," said Kathleen Dahlberg, CEO, 2Unify.

"We also took this opportunity to expand redundancy in both the application and database architecture", reports James Rothenberger, CTO, 2Unify. "By leveraging our current Web services model we can both scale on demand and support customer's 3rd-party application integration."

Headquartered in the Greater Reading Area of Pennsylvania, 2Unify provides teams with communications services – across all their devices. The service is self-service for by each group's coordinator and members supporting real-time message delivery, member polling, and changes to numbers and email addresses. Privacy and confidentiality is under the control of each member and the group. 2Unify's service is built on patent pending technology and processes. The service utilizes world-class communications and information services assuring controls and performance.
